

---

# Transforming Communities, Changing Behaviours & Saving Lives at the Last-mile using Technology

ZMQ Development is a non-profit organization that aims to improve the lives of underserved and marginalized communities by addressing challenges in healthcare, climate change, livelihoods and education through the use of data-driven technologies, behavioral insights and innovative solutions. ZMQ helps communities create meaningful change by challenging harmful social norms and using a systemic approach that ensures impact is sustainable and scalable. Its programs are tailored to local contexts, ensuring solutions remain relevant, inclusive and community-owned across diverse geographies.

As a non-profit, ZMQ operates through two complementary arms. Its **Community Implementation arm** focuses on direct, on-the-ground engagement with communities to improve lives using technology while its **Technical Assistance arm** provides partners with technology, training and operational support to strengthen implementation and scale impact.

Established in 1998 in New Delhi, ZMQ is a pioneer in digital transformation, delivering 230+ behaviour-change projects and 65+ system-change solutions, reaching over 275 million people worldwide.

Through a South-South collaboration model, ZMQ scales proven innovations across LMICs including Uganda, Rwanda, Afghanistan and DR Congo with offices in Kampala and Montreal; supporting its growing global impact.

 **Vision:** To build an inclusive society where every underserved community has access to quality healthcare and dignified livelihoods.

 **Mission:** To transform underserved communities through data-driven technologies, behaviour change tools by delivering equitable healthcare and creating dignified livelihoods rooted in community engagement, inclusion and empowerment.

## ZMQ's Multi-Dimensional Approach

### Reaching the Unreached

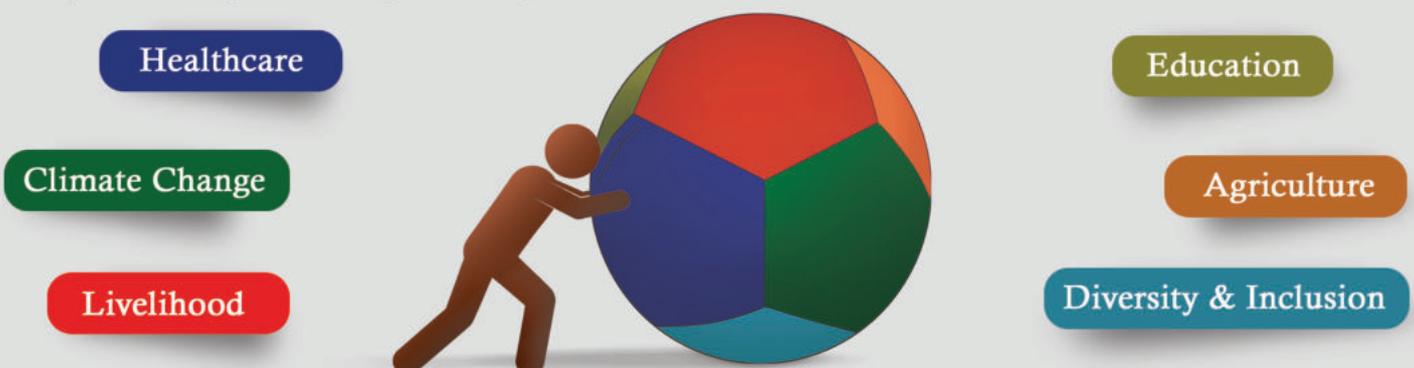

ZMQ supports underserved, marginalized and vulnerable communities, with a particular focus on women and girls. Its work spans low-indicator geographies (aspirational blocks and districts) across diverse settings - including rural areas, tribal belts and urban slums. ZMQ's models are designed to operate effectively at scale.

*ZMQ also works in fragile and crisis-affected settings such as war zones, conflict areas and refugee camps.*

### Holistic Development Approach

ZMQ's holistic development approach, symbolized by a coloured sphere, recognizes the deep interconnections between social development domains. Progress in one area sparks ripple effects in others, collectively enhancing overall quality of life.

## ZMQ's Three Pillars for Integrated Development Impact

At ZMQ, development is integrated - technology-led, grounded and evidence-driven. Our work rests on three equally strong pillars, each reinforcing the others and intersecting continuously: technology informs implementation, implementation strengthens data, and data improves design. This integrated model ensures every investment translates into measurable outcomes, transparency and sustained impact.

### 1 Technology & Systems Innovation

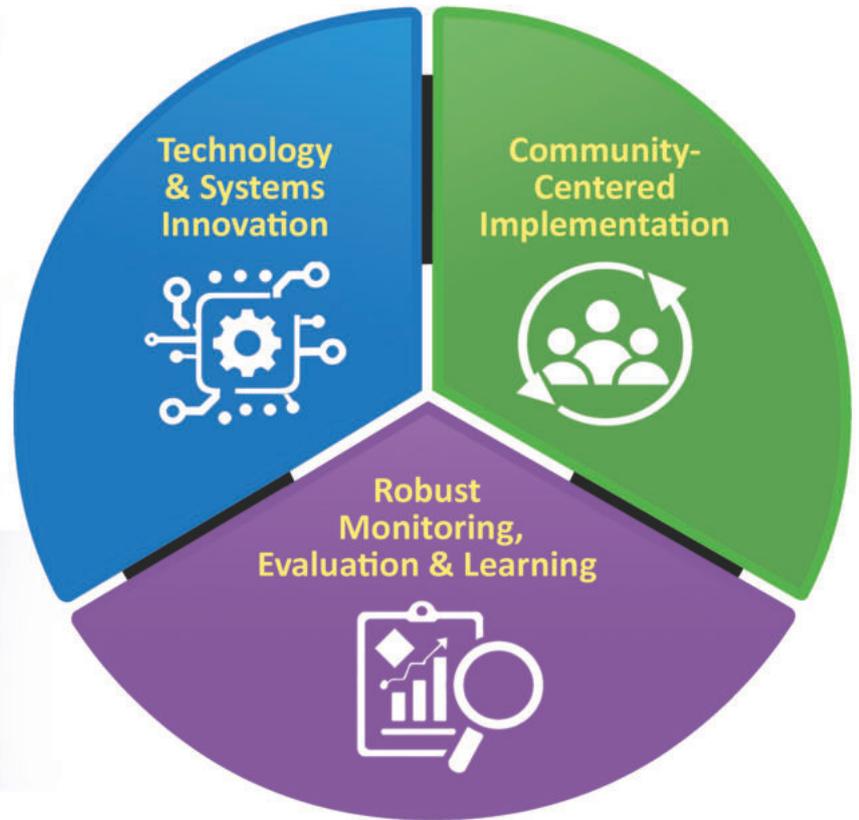

- Digital innovations & platforms
- AI & data systems
- Scalable tech solutions
- Digital SBCC & behavioural design

### 2 Community-Centred Implementation

- Community engagement & co-creation
- Last-mile delivery & access
- On-ground deployment & partnerships
- Capacity strengthening

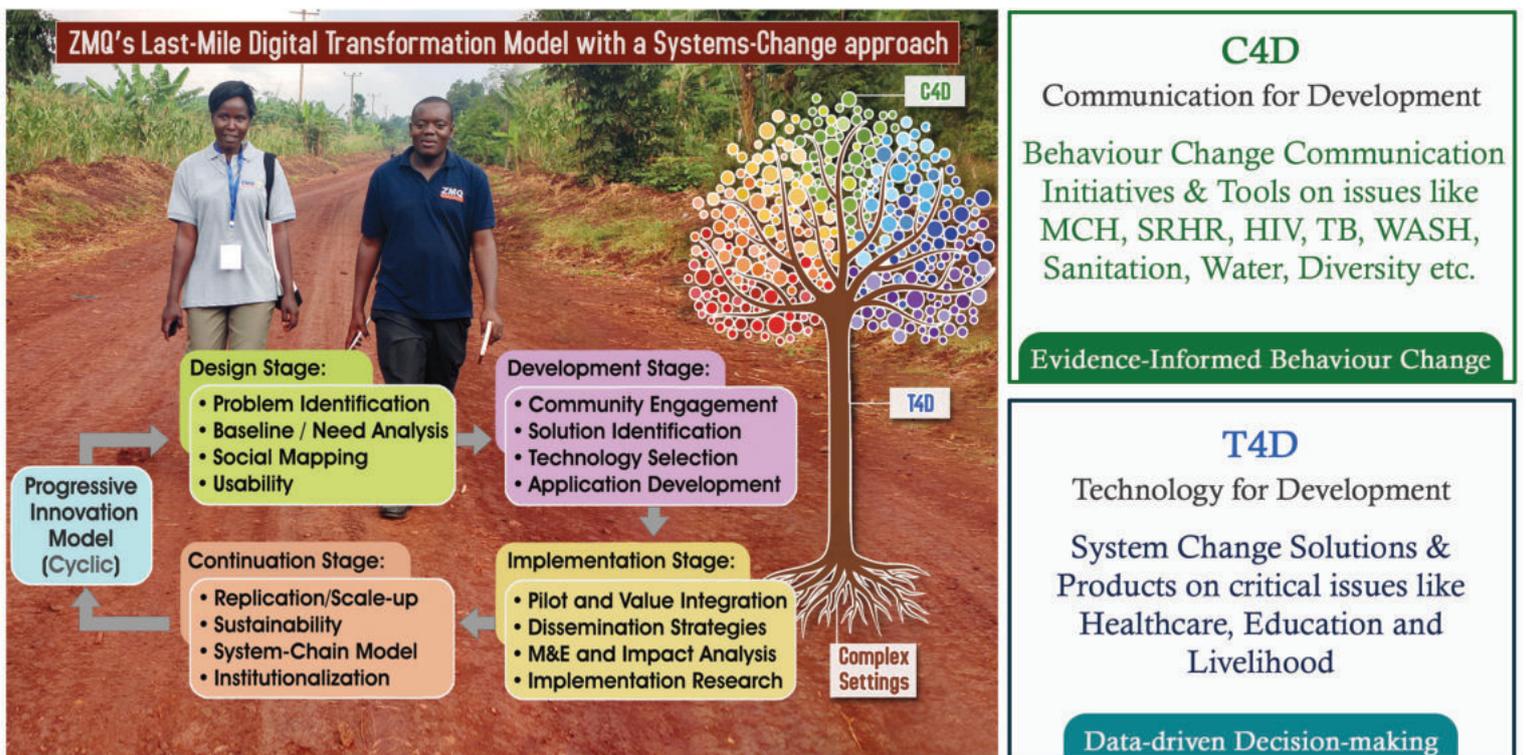

### 3 Monitoring, Evaluation, Research & Development

- Real-time dashboards & data systems
- Evidence generation & learning
- Impact & outcomes tracking
- Scale, replication & knowledge sharing

## ZMQ's Digital Transformation Model-Harnessing Technology for Ground-Level Impact

ZMQ's last-mile digital transformation is grounded in data justice and community ownership, integrating its T4D framework with C4D behavior-change tools and a progressive innovation model to deliver programs that are impactful, transparent and measurable. Leveraging artificial intelligence and decades of grassroots data, ZMQ generates predictive insights and informed decision-making that improve outcomes and drive sustainable change.

## ZMQ as Community Implementation Arm

ZMQ is a women-centric technology organization, with 95% of beneficiaries being women, girls and children, that creates inclusive digital solutions to empower them in health, livelihoods and climate action. By working closely with frontline health workers, ZMQ supports community development and drives sustainable change from the ground up.

### MIRA CHANNEL

Mobile Phone-based Maternal & Child Health for Rural Women

PROBLEM

Maternal and Child Health (MCH) remains a major concern in India and other developing countries. Systemic inequities, gender discrimination, malnutrition and weak primary care leave women with poor awareness and limited access to quality services. Inadequately trained, overburdened health workers and fragile health systems further delay care and worsen outcomes.

SOLUTION

MIRA is an integrated mobile-based platform that provides health communication to rural women. It is used by community health workers (CHWs) during their weekly home visits to deliver timely information, share health tips, track women and children, monitor high-risk pregnancies and connect with life-saving health services.

OUTCOME

**Stronger Health Systems**  
Better-trained health workers

**Women Empowerment**  
Informed, proactive mothers

**Early Risk Detection**  
Timely identification and referral of high-risk pregnancies

**Improved MCH Indicators**  
Lower MMR/IMR, higher institutional deliveries & ANC's

### SAKHEE

Immunization in Urban-Slums by engaging Transgenders

Beneficiary Mapping

Mobile Tracking

Digital Story Telling & Talking Comics

Recall Reminder System

Immunization Delivery

PROBLEM

Overcrowded urban slums often characterized by poor sanitation, vaccine hesitancy, fragmented and migratory populations, poverty-driven priorities, lack of trust in health systems and the absence of data and digital tools make immunization delivery extremely challenging.

SOLUTION

Overcrowded urban slums often characterized by poor sanitation, vaccine hesitancy, fragmented and migratory populations, poverty-driven priorities, lack of trust in health systems and the absence of data and digital tools make immunization delivery extremely challenging.

OUTCOME

**Wider Community Reach and Identification**

**Higher Immunization Referrals and Uptake**

**Reduced Vaccine Hesitancy**

**Successful Conversions**

# FREEDOMTB'S ACTS

## Mobile Phone-based TB Adherence and Treatment System

**Stage I: Active Ground Building**  
Learning Tools/ Digital Stories/ Interactive Games/ ACSM

**Stage II: Active Case Finding**  
Door-to-Door Screening / Testing / Referrals

**Stage III: Active Patient Compliance**  
Patient tools for Evidence based Reporting (VOT)

**Stage IV: Community-led Supervision**  
Group Active Compliance/ Family ACTS / Monitoring

**Stage V: Active Treatment Management**  
OUT-TB Platform/DMCs/TB Units/Nikshay Integration

**Stage VI: Active Ground Assessment**  
Spatiotemporal Epidemiological Model / e-Predict

### PROBLEM

India and several African countries carry a high TB burden, contributing to global cases and deaths. Poverty, malnutrition, overcrowding, and poor ventilation worsen the crisis. TB-HIV co-infection remains a leading cause of death, while stigma and low awareness drive patients to hide symptoms. Missed treatment doses fuel dangerous drug-resistant TB. Migration, conflict and displacement further disrupt treatment and spread the disease to new areas.

### SOLUTION

**FreedomTB's ACTS** (Active Care & Treatment Strategy) is a six-stage holistic and tech-enabled community-led model. Its core is being 'active' which uses digital strategies like behaviour change, case finding, adherence to treatment and video observed treatment (VOT) to reduce stigma and build peer support networks which supports patients in remote areas.

### OUTCOME

**Empowered Communities**  
Raise TB awareness and change behaviour

**Early Detection**  
Spot TB in vulnerable groups

**Digital Tools**  
Streamline screening, referral and care

**Treatment Adherence**  
VOT keeps patients on track

**Better Outcomes**  
Higher cure, follow-up and adherence rates

**Frontline Training**  
Equip workers and integrate with NIKSHAY

**MIRA** is ZMQ's backbone model which bridges the last-mile through an integrated approach that combines door-to-door engagement, behaviour change communication, tech-enabled patient tracking and real-time data thereby harnessing AI and grassroots insights to predict emerging health trends. A few of the programs are:

**PROJECT VISHWAAS**

**Childhood Pneumonia**

**SEHAT SAATHI**

**Non-Communicable Diseases**

**INFORM**

**Screening Mental Health**

**FREEDOM POLIO**

**Polio**

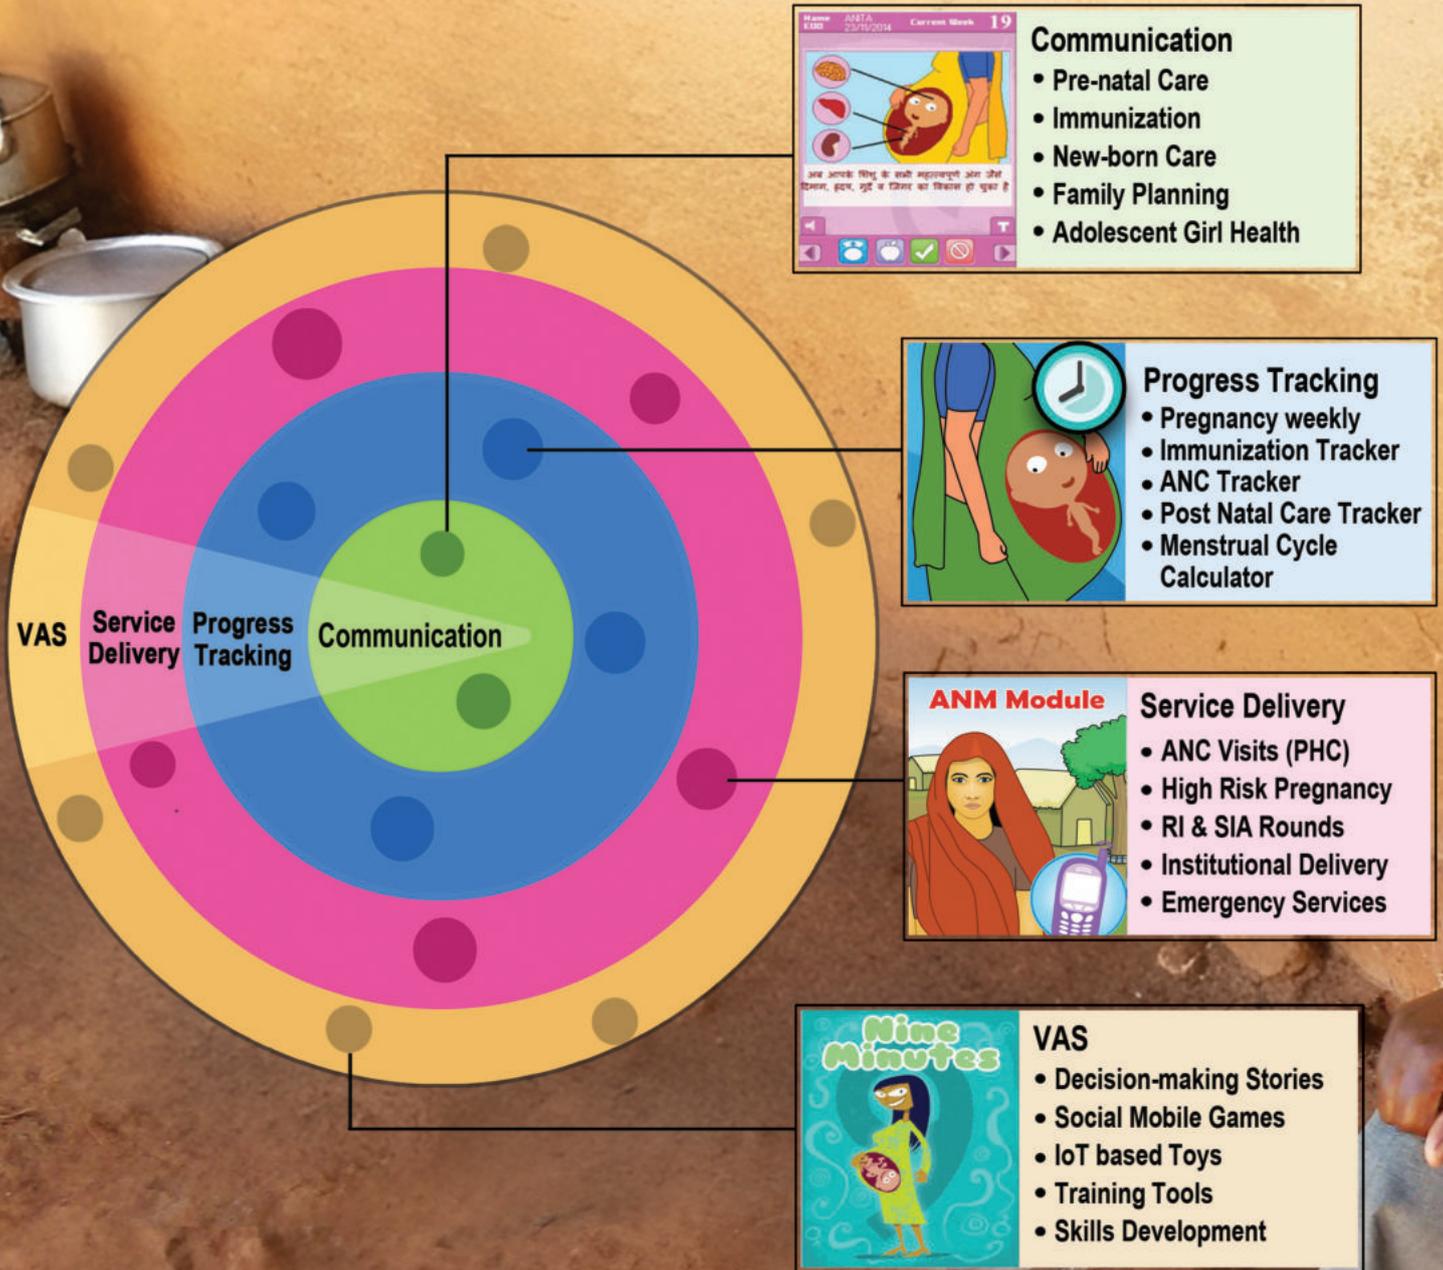

**FREEDOM HIV/AIDS**

**HIV/AIDS**

**THE GAME CHANGER**

**Sexual Reproductive Health & Rights**

# MIRA Model of Delivery

**Thematic  
Areas**

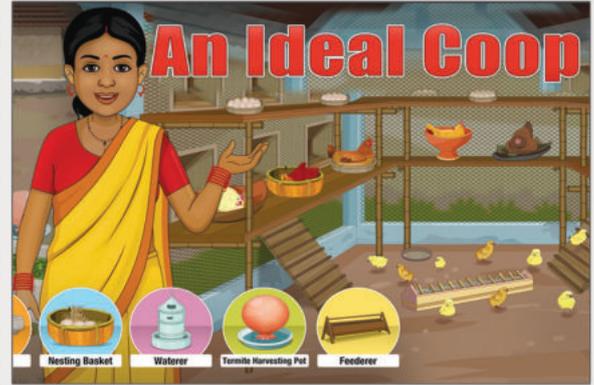

Home visit by a Community Health Worker (VHT) with MIRA Toolkit in Bugembe in Jinja district, Uganda

# HATCHING HOPE INITIATIVE

Improving Nutrition and Entrepreneurship Training in Tribal Areas

**PROBLEM**

Undernutrition and economic inequality in India continue to weaken women's health, especially in tribal and rural areas. Limited nutrition and healthcare reduce their strength and productivity, restricting access to education and entrepreneurship. This traps families in cycles of poverty and intergenerational malnutrition.

**SOLUTION**

Hatching Hope India empowers women in tribal Mayurbhanj, Odisha, through backyard poultry farming to improve nutrition and create sustainable livelihoods. The program blends digital and non-digital training, community mobilization, strong implementation and real-time monitoring via a live dashboard.

**OUTCOME**

**Improved Household Nutrition**  
Increased access to poultry and eggs

**Enhanced Women's Income**  
Women earn through poultry entrepreneurship

**Built Entrepreneur Network**  
Training, market links and live monitoring

**Improved Living Standards**  
Health, education and well-being

**Facilitated Sustainable Funding**  
Support for future entrepreneurship programs

## AAJEEVIKA CONNECT

Mobile Open School

Mobile Open School is a universal platform that provides digital, skill-based training to low-literate women in rural and tribal areas through micro-classrooms. It builds farm, off-farm and non-farm skills using interactive role-play simulations in local languages, delivered in group sessions of 15–20 women; ideal for Self Help Groups. The program offers soft-skills training in financial literacy, packaging, branding and marketing.

Rural Women Entrepreneurship

Skill development for marginalized

# CONNECT-2-CLIMATE

Strengthening Climate Resilience & Adaptation

**PROBLEM**

India ranks among world's most climate-vulnerable nations with 80% of its population living in districts exposed to hydro-meteorological disasters. Floods, droughts, cyclones, heatwaves and shifting monsoons are already threatening health and livelihoods, making climate change a public health emergency that demands early detection, surveillance, preparedness and adaptive action.

**Vector-borne diseases**  
malaria, dengue, chikungunya are spreading to new regions.

**Waterborne infections**  
cholera, typhoid and diarrhea outbreaks are increasing due to extreme rainfall and flooding.

**Heat-related illnesses**  
exhaustion and heat strokes are rising in frequency and intensity, along with worsening air quality.

**SOLUTION**

**AI-Based Epidemiological Preparedness for Urban Slums**  
Uses AI to strengthen early disease detection, real-time health surveillance and targeted epidemiological interventions in vulnerable urban-slum communities.

**AI-Based Vulnerability Index on Climate Change and Health**  
AI-driven tool assessing community vulnerability to climate-related health risks by analysing environmental, health and socio-economic data enabling targeted interventions and real-time monitoring

**OUTCOME**

Identification of high-risk population and geographic hotspots for climate-related health threats.

Early warning and targeted interventions to prevent outbreaks and malnutrition.

Scalable, evidence-based solutions to mitigate climate health impact and protect at-risk population.

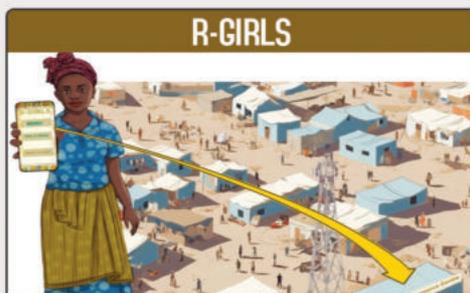

Strengthened epidemiological preparedness and health system in vulnerable communities.

## SOUTH-SOUTH COLLABORATION

Expanding Programs in LMICs

ZMQ scales its proven solutions to LMICs, adapting and contextualizing them to local needs; replicating in Afghanistan, Uganda, DRC and Haiti; collaborating with indigenous communities in Quebec. ZMQ continues to expand its initiatives across these regions, ensuring it remains locally relevant and globally impactful.

### Communication for Development - C4D

ZMQ's *Communication for Development (C4D)* model is a two-way, interactive process that empowers communities to participate in decisions affecting their lives. By strengthening grassroots Social & Behaviour Change Communication strategies, it serves as a powerful tool to reduce inequities, build inclusive communities and promote social justice.

#### Role-Play Games

ZMQ uses role-play games to drive behaviour change by simulating real-life challenges. Users face real-life challenges, build problem-solving skills and adopt values and behaviours by following role models.

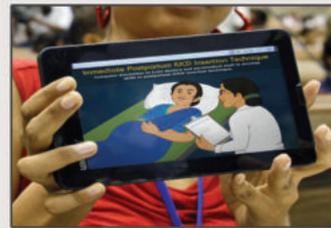

#### Decision-Tree based Storytelling

ZMQ uses decision-tree strategies by presenting multiple scenarios, where each scenario has an alternate course of action and its possible consequence. This enable users learn from their decisions and its outcomes, thus inculcating sustainable behaviour change.

#### m-Training Tools

ZMQ uses edutainment (*educational-entertainment*) based approach to build digital tools for capacity building, training and awareness generation. It is successful to train CHWs, ANMs, Field Coordinators, and Para-medics.

#### IoT Toys & AI-based Wearables

Promote health through continuous sensing, personalized feedback and real-time motivation for adopting healthy behaviours. These devices enhance self/community care by tracking health data, predicting risks and guiding healthier choices.

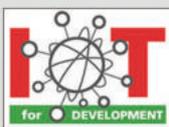

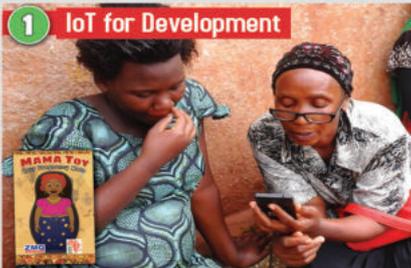

### Technology for Development - T4D

ZMQ's *Technology for Development (T4D)* Model is a dynamic framework that harnesses the power of technology, data and artificial intelligence to accelerate social transformation. The T4D approach is scalable, replicable and interoperable, enabling seamless integration with existing systems. The model embeds robust monitoring and evaluation mechanisms powered by real-time data analytics and AI-driven insights.

### ZMQ's Triple Impact Model

ZMQ's Triple Impact Model leverages artificial intelligence and two decades of grassroots data to drive development through forecasting trends, predictive insights and informed decision-making, thereby strengthening public health, advancing climate resilience and transforming social behaviours.

Collecting grassroots data and embedding IoT tools in the ecosystem of disconnected regions to generate ground-level data and knowledge. The process is based on data justice

Designing AI models to empower communities and policymakers by using ground-level data to generate actionable insights, deliver life-enhancing solutions and support decision-making

Generating evidence by rigorously testing models and applications through scientific methods and translating the findings into practical solutions that drive sustainable human development

## ZMQ as Technical Assistance Arm

ZMQ provides technical assistance to partners and donors by equipping them with technology, delivering training, building capacities and offering ongoing support to strengthen their initiatives.

### CSR

ZMQ partners with corporates and foundations to design and implement CSR-aligned projects that address critical social issues. For example, with Philips Foundation, ZMQ leverages CSR funding to create impactful health programs at the grassroots.

### CO-DEVELOPMENT

ZMQ co-develops tech projects with NGOs, donors and multilateral agencies by combining their resources, expertise and network. For example, with Save the Children, codeveloped Childhood Pneumonia initiative.

### CONSULTING

ZMQ develops customized tools and technologies for corporates, NGOs and donors; either as their stand-alone products or with implementation strategies. For example, ZMQ developed behavior change and training tools for Jhpiego.

### RESEARCH

ZMQ collaborates with academic and research institutions to conduct studies and pilots, generating evidence and publishing findings. This strengthens credibility, contributes to global knowledge and encourages collaborative research.

## Quick Pick Solutions

### HEALTHCARE

- Health Awareness & Behavior Change (SBCC)
- Digital Patient Monitoring & Care Continuity
- mHealth & Connected Care Systems
- Community Health Workforce Training & Support
- AI-Driven Disease Surveillance & Early Detection
- AI-Powered Epidemic Intelligence & Community Health

### EDUCATION AND TRAINING

- Education, Training & Capacity Building
- Immersive & Innovative Learning Technologies
- AI-Driven & Personalized Digital Learning Platforms
- Interactive Content & Educational Games

### LIVELIHOOD SOLUTIONS

- Livelihood & Micro-Entrepreneurship Support
- Women's Entrepreneurship & Financial Literacy
- Rural Skills Development and Capacity Building
- AI-Enabled Platforms for Rural Economic Growth

### CLIMATE CHANGE AND ENVIRONMENT

- Climate Change & Environmental Protection
- Disaster Preparedness, Response & Resilience
- Community Awareness & Behavioural Change
- Early Warning & Weather Preparedness Systems
- Environmental Monitoring & Smart Technologies
- Capacity Building & Sustainable WASH Solutions

### AGRICULTURE AND RELATED INFORMATION

- Farmer Capacity Building
- Water & Irrigation Management Solutions
- AI-Driven Crop Monitoring & Advisory
- Weather Forecasting & Climate Advisory Tools

### DIVERSITY & INCLUSION

- Awareness and Training
- AI-assisted Tools for Bias Reduction
- AI-driven Behaviour and Data-Driven Insights
- Programs to Empower Women LGBTQ+
